The Dark Matter is a gravel bike that will take you off the beaten path with this gravel bike. It adds stability and prevents toe overlap. The Dark Matter has a longer wheelbase than our endurance bikes, but it remains shorter than most other gravel bikes available with equivalent tire clearance. This is only possible with our dropped chain stay design.

TO THE END OF THE PAVED ROAD AND BEYOND

When we set out to design the Dark Matter, we made sure not to come up with just another gravel bike. Our方针 built to true gravel race, a fast dirt road bike with a geometry adapted from our celebrated road frame. We wanted a bike offering improved stability but with a racing behavior, a bike that would feel just as fast and responsive on the trail that it would on the road. Mission accomplished.

To our design ethos and road race background, the Dark Matter was primarily intended to be used with 700c wheel, although 650c wheel would depending on ride width.
